

# Do you export to the United States (US) ?

- If yes, consider aligning your facility security practices with C-TPAT criteria for international supply chain security compliance.
- C-TPAT, managed by US Customs and Border Protection (CBP), aims to reduce global supply chain security risks.

## Why C-TPAT Assessment

- Regular assessment of supply chains is essential for US importers in C-TPAT.
- To identify, mitigate, and eliminate security risks while fostering continuous improvement.

- Non-compliance with security requirements may cause your shipment delays or seizures by CBP (Custom and Border Protection in the US), impacting business operations and finances.
- Aligning with C-TPAT security criteria will enhance and strengthen your facility security practices.

## Benefits of C-TPAT Audit

- Opportunity to strengthen their own security practices to minimize security risks.
- US importers prefer sourcing from C-TPAT compliant facilities
- CBP does fast processing of shipping documents and custom clearances of foreign cargo from C-TPAT Compliant facilities.
- C-TPAT Compliant facilities will potentially have an added edge to explore and secure more business avenues from US Importers.

# **RSJ Inspection Service Limited**

RSJ has launched RSJ SCSVeri, a dedicated portfolio for security assessments like C-TPAT. It specializes in evaluating facilities against below listed security standards meant for foreign manufacturer.

- Security Vision and Responsibility
- Risk Assessment
- Business Partner Security
- Cybersecurity
- Conveyance and Instruments of International Traffic Security
- Seal Security
- Procedural Security
- Agricultural Security
- Physical Access Control
- Physical Security
- Personnel Security
- Education, Training and Awareness
